

Are you a student with an interest in one or more of the following?

Web Services  
User Interface Design  
Software Agents  
Open Source

Data Extraction  
Machine Learning  
Server Software  
Genealogy

If so, then you're just who we're looking for!

## Come join the Distributed Family Tree Project!

Our goal is to establish the Distributed Family Tree, an open network of genealogical data and metadata. The big idea is that we can combine all available genealogical information on the Internet into a single distributed network—a single family tree.

Enter Genesis, the current focus of effort. Genesis is a software research assistant whose purpose is to make finding genealogical data on the Internet a lot easier. As information is found, Genesis automatically analyzes and correlates it to connect what are now isolated family trees into one distributed network. Based on the Eclipse Rich Client Platform, Genesis is fully extensible through a powerful plug-in system.

We are currently looking for students who want to help push the envelope of computer-assisted genealogy. If you are up for a challenge and want to make a big, positive impact, become a contributor to the DFT project!
